Personal projects

Computing — projects : github.com/Corentin648

Creation of a 'Game of Life' management website (September 2020) : I developed a website with React.js. I created all of this thanks to my skills in JavaScript but also in web design (React Bootstrap and CSS).

Creation of my personal website (June 2020 - ...) : I decided to code my own Eportfolio in order to present all of my personal projects and my school ones. I developed it thanks to React.js and I created my own CSS designs.

Creation of an Android app (June 2020) : I have developed a little Android app with Java Android and XML. Additionally, I used the Firebase's web service called DataBase. The aim was to register counters on the app, the latter being managed by the online database.

Creation of a video game with Godot (June 2020) : With Godot Engine, I created a 2D game based on the web game 'Achtung, die Kurve !'. Then, I learned a lot about the mechanics of a game engine.

Education

ENSEEIHT, Toulouse — *Softwares engineering* (2019 - ...)

Learning of many tools for computing and numerical mathematics

Prep school Lycée Clemenceau, Nantes   (2017 - 2019)

Extensive learning in linear algebra and analysis

Interests

Computing — *Coding*

I have a passion for coding algorithms and I like to learn different languages by myself on the Internet.

Reading — *Science fiction, Fantasy*

I really like to read and in particular 20th century science fiction which deals with many things of today, according to me.
